

## **EXTENDED WARRANTY TERMS AND CONDITIONS**

The standard Ampegon Power Electronics AG warranty conditions are twelve (12) months from Site Acceptance Test (SAT) or fifteen (15) months from delivery, whichever occurs first.

An extended warranty is however possible with the following conditions:

- Each additional twelve months of warranty extension costs 2.5 % of the cost of the warranted equipment purchase price plus Swiss Francs (CHF) 12'000 fee for a service visit prior to the extended warranty period commencing.
- Ampegon Power Electronics AG can grant up to four (4) additional years warranty extension [maximum five (5) years total warranty] upon payment of the appropriate fee at time of equipment purchase.

The extended warranty shall start, following completion of a preventative maintenance inspection, once the date of the standard warranty has expired. This shall be defined according to the following schedule:

### **Types of Warranty:**

- **Standard:** at no additional cost, lasting twelve (12) months from SAT or fifteen (15) months from delivery, whichever occurs first
- **Extended:** at additional cost of CHF 12'000 (for obligatory maintenance inspection) + 2.5 % of equipment cost per year (for  $n \leq 4$  additional years): 12 + ( $n \times 12$ ) months from SAT or 15 + ( $n \times 12$ ) months from delivery, whichever occurs first.

At the end of the standard warranty, continuation to extended warranty shall be conditional upon Ampegon Power Electronics AG making an obligatory preventative maintenance inspection for warranted equipment. The costs for this visit are included above, but any necessary consumable spare parts are not included, as it is assumed that customers will have sufficient consumable spares in stock. This is to ensure that all instructions on Ampegon requirements for equipment servicing and maintenance are respected.

Please note that warranty may only be extended if previous standard warranty period is continuous and unbroken. If customers have insufficient stocks of consumable spares, any delay while the customer

sources replacements may cause warranty to lapse. Without timely completion of the preventative maintenance inspection, any further extended warranty shall be void and any payment previously made shall be forfeit.

If for any reason Ampegon's engineering schedule prevents timely inspection (i.e. the delay is caused by Ampegon), extended warranty shall automatically continue at least until completion of the engineering visit.
